T What is ESC/POS?

EPSON took the initiative by introducing ESC/POS[®], a proprietary POS printer command system, which includes patented or patent pending commands and enables versatile POS system construction with high scalability. Compatible with all types of EPSON POS printers and displays, this proprietary control system also offers the flexibility to easily make future upgrades. Its popularity is worldwide.

ESC/POS[®] is designed to reduce the processing load on the host computer in POS environments. It comprises a set of highly functional and efficient commands that enables the full realization of the potential of printers.

A command set designed for universal applicability

The commands that are supported by all EPSON POS printers and those that are specific to individual models are clearly described. This means that ESC/POS[®] compatible software will work with any system and be suitable for a wide range of applications.

Superb expandability allowing the addition of new functions

New functions can be added and accommodated by the categories already provided in the command system.

Allows more effective use of software

Once a software application has been created for one printer in the TM series, it can be used as the basis for versions for the other printers in the series. Only a small portion of the program source code needs to be modified.

If you would like to get more information about ESC/POS[®] commands, contact the dealer where you purchased the product to get the ESC/POS[®] Application Programming Guide (ESC/POS[®] APG).

6 Self-test Mode

In self-test mode, the following items are checked and printed out:

- Control software version
- DIP switch settings
- And others.

Use the following procedure to start a self-test.

1. To start the selftest, hold down the FEED button (*1)(*2) and turn on the printer with the roll paper cover closed.

Note:

(*1) With the TM-J2000/TM-J2100, hold down the PAPER FEED button instead of the FEED button.

(*2) With the TM-L90, keep holding down the FEED button until the ERROR LED comes on.

2. After printing the current printer status, the printer prints the message to show the standby state; then the paper out LED blinks. The printer is now in the self-test wait mode.
3. To start a test print, press the FEED button when the printer is in the self-test wait mode.
4. Make sure that the following message is printed.
